What would life be like without plumbers? This industry needs skilled men and women to work in both commercial and residential settings completing tasks such as the installation, maintenance and servicing of plumbing fixtures and systems for drinking water, drainage waste and vent, and heating. By investing just two semesters of your time, you can earn a diploma and receive one year credit toward an apprentice license.

Program Overview

This program will provide you with the knowledge and skills necessary to design, install and repair residential and commercial plumbing systems. A large part of the job involves the ability to understand building blueprints to assess layouts of plumbing systems and water supply. You will learn plumbing codes and theory, safety and the proper use of tools. You'll also gain a large amount of hands-on experience that involves lab assignments. Beginning in fall 2020, you will gain real-world experience by plumbing the student-built house on the Milford Campus.
