Nondestructive testing is examining an object without destroying its usefulness. Our Nondestructive Testing Technology program is one of a few programs of its kind in the United States. We train students to examine products and materials for flaws without damaging the products. Graduates take pride in knowing they are doing something to keep our world safe. Jobs can be found in many industries, including aerospace, power generation and utilities, chemical and petrochemical, defense and military (civilian and enlisted), general manufacturing, and transportation.

As an SCC Nondestructive Testing Technology program graduate, I received the knowledge and support needed to succeed as both a Level III NDT Technician and a business owner. SCC's comprehensive curriculum is highly respected in the NDT community. I had numerous prospects for employment upon graduation. With SCC as a foundation and a lot of hard work, I was well prepared to take advantage of the opportunities and to build a successful career.
