CHOOSE YOU!

STEM

If you're looking for a career where new job opportunities are very likely, SCC's Geographic Information Systems Technician program is for you. There are careers available in almost every field, including government, commercial, educational, and private organizations.

GIS technicians interpret, manipulate and manage digital data. They also design and prepare data using GIS hardware and software applications.

GIS improves decision making by government officials, identifies at-risk and under-served populations within a community, improves allocation of resources and planning, and manages natural resources and improves communication during a crisis, such as the COVID-19 pandemic. Geographic Information Systems offer a radically different way to produce and use maps to manage communities and industries.

Credit hours required for graduation:

Geographic Information Systems Technician

»Certificate 18
