

Personality + Career

Concrete Construction Technician students like to see results, value working as a team member, and have strong communication skills. They also want to work outdoors and have the ability to perform physically demanding work. Basic knowledge of math and geometry, high spatial relation ability, and the ability to complete a multi-step task are also important.

| Program | Credential | What do students learn in the program? | What do graduates earn? | Career Opportunities | Are graduates prepared for/ to complete exams for specific credentials/licensing/certifications at the end of the program (each credential level)? | Required Tools, Supplies, and Uniforms |
|----------------------------------|------------------------------|--|---|--|--|--|
| Concrete Construction Technician | Certificate | Students learn how to plan for and construct vertical and horizontal concrete projects. They learn on-the-job safety and how to use concrete tools and materials. Students will gain experience in site preparation, concrete forming, reinforcing, and finishing techniques. | New program. No graduate salary data to report. | Concrete Technician | Students graduate with a forklift certification and have completed OSHA 10 training. Students will have the opportunity to get American Concrete Institute certified in multiple areas of the concrete industry. | Tools are required. See information provided. No uniform is required for this program. |
| Concrete Construction Technician | Diploma | In addition to the skills listed above, students learn to troubleshoot the concrete process, including scaling and natural expansion and contraction. Students will learn advanced concrete processes such as tilt-up, paving, architectural finishes, superflat floors, surface treatment, and repairs. | New program. No graduate salary data to report. | Concrete Specialist | Students graduate with a forklift certification and have completed OSHA 10 training. Students will have the opportunity to get American Concrete Institute certified in multiple areas of the concrete industry. | Tools are required. See information provided. No uniform is required for this program. |
| Concrete Construction Technician | Associate of Applied Science | In addition to the skills noted above, students will further develop their site-preparation skills and learn the surveying, estimating, and drafting processes for residential and commercial concrete, including use of Building Information Modeling BIM (Revit) and Builder trend software. | New program. No graduate salary data to report. | Concrete Specialist Project Foreman Project Engineer | Students graduate with a forklift certification and have completed OSHA 10 training. Students will have the opportunity to get American Concrete Institute certified in multiple areas of the concrete industry. | Tools are required. See information provided. No uniform is required for this program. |

The concrete field is growing, and a degree in Concrete Construction Technician from SCC will equip you with the skills to succeed in a diverse field. Students learn theory and hands-on application of residential and commercial concrete, design and estimating tasks for residential and commercial structures. Additionally, students will learn about concrete placing and troubleshooting and plant or facility operations.

Working with employers and industry organizations, students will work on live concrete projects and gain invaluable experience.

There is a high need for skilled workers in the concrete industry, and the career opportunities and earning potential are limitless!

The SCC Experience

- » The SCC Concrete Construction Technician program was created as a result of industry demand, meaning employers are seeking the specific skills and that jobs are readily available. The program teaches today's modern construction processes.
- » Students spend three hours in the lab working hands-on with tools, equipment, and construction materials for every one hour spent in the classroom. That means 75% of a student's experience is spent in the lab developing key skills for a successful future.
- » SCC's Concrete Construction Technician program is one of the only concrete-specific programs in the region. Employers are eager to work with SCC students, many offering assistance to support tuition and tools.
- » The program is industry driven to ensure students learn what they need to know to advance in their career. Students will participate in activities and projects with the American Concrete Institute, the Nebraska Concrete and Aggregates Association, the National Association of Home Builders and the Associated General Contractors group. Students will gain hands-on experience working on live concrete tasks.
