

# Students gain real world knowledge at CNS

3/16/2018

Six students from Southeast Community College (SCC) spent a week job shadowing and getting a closer view of Cooper's day-to-day operations.

Members of SCC's Energy Generations Operations program (left to right) Logan Armknecht, Lynnea Norton, Andrew Baehr, Stephon Rocha, Bailey Giles, and Zac James spent the week seeing the real world application of their education.

While on site, the group toured the plant, attended meetings, received some basic operator training and participated in other activities.

Southeast Community College students toured Cooper Nuclear Station this week.
